

BAIYI WANG (EMOO)

(215) 596-9449 | emoowang392@gmail.com | Philadelphia, PA | LinkedIn | GitHub | Personal Website

EDUCATION

University of Pennsylvania

Master of Applied Sciences in Computer Science

Nanjing University

Bachelor of Laws in Sociology

Philadelphia, PA

Aug 2025 – May 2027

Nanjing, China

Sept 2021 – Jun 2025

TECHNICAL SKILLS

- **Languages:** Python, Java, C++, JavaScript, SQL, C, HTML, Rive, Swift
- **Frameworks & Tools:** FastAPI, React, Node.js, Docker, PostgreSQL, Elasticsearch, LangSmith, PyTorch, OpenAI API

EXPERIENCE

Meituan

Software Engineer Intern (AI Backend)

Beijing, China

May 2026 – Jun 2026

- Developed backend services for Meituan Waimai Milktea blindbox campaigns on one of China's largest local-services platforms (770M+ annual users, 14.5M+ merchants), implementing RESTful APIs, PostgreSQL database operations, and randomized reward logic for production systems.
- Built reusable AI Agent Skills on the OpenClaw framework by migrating production databases and encapsulating backend capabilities into modular agent workflows.
- Designed an Agent-to-UI interaction framework supporting timer components, interactive cards, and state synchronization for real-time AI interactions.

Tencent (WeChat Search)

AI Search Product Engineer Intern

Guangzhou, China

Jun 2026 – Present

- Built an LLM-powered query recommendation pipeline for WeChat Search using a 0.6B language model, improving long-tail query generation by 500% through prompt engineering and automated data pipelines.
- Enhanced the search pipeline by optimizing mixed landing page result ranking and query-to-live retrieval strategies, improving live-stream recall and overall search result relevance.
- Proposed and shipped "Following" and "Recently Viewed" filters for WeChat Video Search, validating via A/B testing and leading a phased production rollout.

Starways AI

AI Engineer

Beijing, China

Apr 2025 – Aug 2025

- Co-founded an AI recruiting platform backed by \$0.7M seed funding from Sequoia China, leading development of LLM-powered recruiting agents.
- Built planner-worker multi-agent systems using FastAPI, LangChain, SQL, and Elasticsearch, implementing six production agent tools and benchmark evaluation workflows.
- Developed an internal LLM evaluation platform integrating prompt libraries, databases, debugging environments, and automated benchmarking for AI workflow validation.

Moonshot AI

AI Product Engineer Intern

Beijing, China

Sep 2024 – Apr 2025

- Led development of MCP-based search workflows and prompt engineering for multimodal LLM search, enabling single-round retrieval across images, PDFs, OCR, and web search to overcome native model limitations.
- Designed and implemented image-based search capabilities, integrating multimodal retrieval pipelines, optimizing search decision prompts for small language models, and delivering end-to-end feature deployment.
- Built benchmark datasets and automated evaluation pipelines for the KimiV multimodal model, improving image similarity, commonsense reasoning, and intent recognition accuracy to over 90%.
- Improved OCR model accuracy to over 90% by replacing legacy APIs, developing Markdown/Mermaid structured extraction pipelines, and reducing annual inference costs by approximately \$3M.

PROJECTS

Image2GPS: Deep Learning-based Geolocation Model

Dec 2025

- Built a ResNet-50 regression model predicting GPS coordinates from images with 38.9 m average localization error.
- Collected 2,500+ street-view images and designed a two-stage classification-regression pipeline for visual geolocation.

Pibo: wearable healthcare companion – First Place in Huawei HarmonyOS 2026

June 2026

- Developed an AI-native digital companion platform that converts users' sleep, activity, and health data into a persistent virtual life across iOS, HarmonyOS and wearable devices. Awarded 1st Prize at AttraX Spring Hackathon and Huawei HarmonyOS Innovation Competition (#1/600+ teams).
- Led product strategy, UX design, and native iOS development using SwiftUI, SpriteKit, HealthKit, WidgetKit, ActivityKit, and Metal, building the core interaction system and health-data-driven gameplay loop.
